BSBI Admission committee

Dear Berlin School for business and innovation admission committee,

My name is Eduardo Antonio Polanco Arrindell and i am coming to your attention to declare my great interest to participating in the admission process of your distinguished education organization. I am an industrial engineering professional from Dominican Republic with more than 3 years of experience in roles related to Engineering, mostly focused on process improvements. I consider myself as a proactive person who is always willing to learn something new and apply my knowledge in resolving real world problems. I always try to do the best and demand to myself to be better every day. Due to my constant efforts in doing my best in engineering related things I have multiple awards, for example, I graduated with the honor magna cum laude with 3.5 GPA. In my current job I was awarded with the aware "Extreme Influencer" for being an outstanding employee.

When I finished school and started deciding which career I wanted for my future, from all, I decided on choosing industrial engineering because I like to learn and be in presence on the manufacturing processes and continuously learn how to develop them and how every side of the process interacts, from manufacturing to logistics, quality, operations, etc, and since engineering has to deal with all parts on the process I was committed to work in the area, and as planned I am.

When I finished college and starting to think in further education, I decided for a master related to engineering, and the description of your master in engineering management just fit perfectly with my expectation. While reviewing the description of the degree I found that it has three focuses and I love the idea to study it focused on project management since currently I have to work a lot with different project inside the organization I works with.

Also, when thinking about when to study, I wanted to do it abroad because I want to learn how others manage processes inside the industry. I chose Germany because your country is renamed for being the best in engineering, and, I got pretty interested in the Bauhaus movement that was developed on Germany while studying product designing subjects on college. Also, it is a good chance to learn a new language and culture, which I am excited about! I chose BSBI because your engineering management program just fits perfectly with my desires of learning and it is in the center of the main city of Germany, berlin, with a lot of big manufacturing and engineering companies. Also, berlin is a city with a lot of interaction of cultures from around the world, so hopefully I can learn how people from all around the world interacts.

I believe that I can take the best advantage of your education, always asking for your help in helping me being the best engineering professional. After finishing my education in your institute, I hope to return to my country, grateful with your institute, to apply the new way of thinking I got from Germany to the reality of Dominican Republic.

Sincerely,

Eduardo Antonio Polanco Arrindell.

Eduardo A. Polanco
